UseMoney AI

✳ USE MONEY. INTELLIGENTLY.

usemoney.ai
Shaswat Deep · deepshaswat@gmail.com

Personalised AI for *investment & wealth* management. No more guesswork.

// THE PROBLEM

India has **216M demat accounts** and **136M unique investors**, served by **fewer than 1,000 SEBI-registered advisors**. Retail investors juggle 2–3 broker apps, track trades in spreadsheets, and get dashboards while institutions get analysts. Real portfolio intelligence (performance attribution, risk, tax) simply doesn't exist for retail, and advice can't scale with humans.

// THE PRODUCT

UseMoney connects **all of a user's brokers**, with 6 live integrations (Zerodha *audited & approved*, Upstox, Groww, Angel One, Dhan, Fyers), reconciles every trade (FIFO pairing, tax lots), and puts a **hedge-fund-grade AI analyst on the user's real portfolio**:

- **Research that cites its sources:** stocks + mutual funds, deterministic math underneath, not LLM guesses; multi-stock/fund comparison built in
- **Portfolio intelligence:** "Why did I underperform NIFTY this quarter?" → attribution, factor exposure, stress scenarios on *your* verified holdings
- **Memory layer** (shipping now): learns your trade history, P&L and mistakes over 3–6 months; advice becomes personal
- **Strategy Builder** (in dev): idea → backtest in **under 24 hours**, vs the 3–6 months it takes retail today

No financial knowledge required. Chat replaces screeners, jargon and paid data subscriptions. What no-code did for building software, UseMoney does for investing.

// WHY WE WIN

1. **The money graph.** Verified holdings + paired trade history across 6 brokers. Brokers structurally cannot build this for each other's accounts; generic AI chat can't see it at all. Switching cost compounds with every synced trade.
2. **Trust as a feature.** Deterministic analytics engines narrated by AI with citations; eval accuracy on the way to a public scorecard.
3. **Velocity.** Entire platform built solo: 6 broker integrations, a 118-tool research agent, 22K passing tests, ~30 PRs in the last 20 days.

// TEAM

Shaswat Deep, Founder/CEO (ex-Harness, ex-AppDynamics). Solo by design at this stage: built the entire platform single-handed, including surviving Zerodha's compliance review; the velocity above is the evidence it works. First hires (engineering + growth) come from this raise.

// MARKET & WHY NOW

$1.8B	$500M	$100M
TAM	SAM	SOM

Y5–6: ~645K paid consumers across 3 tiers + B2B API licensing, the Plaid/smallcase playbook (37% of SOM). **SEBI has just opened US markets to Indian brokers**: our India↔US/NRI corridor launches this quarter (SnapTrade, read-side) at **10x ARPU**. India adds 25M+ demat accounts/yr; AI advice is the only way 136M investors ever get served.

// COMPETITION

Tickertape / smallcase (market tools, not your portfolio) · INDmoney / Vested (US access, not intelligence) · broker AI incl. Zerodha's (single-broker by design) · MultiBagger AI (India-only) · Aster (YC-backed, US-only).

Bloomberg's AI Portfolio Commentary and IBKR's $30M Reflexivity investment validate the category from above. **Nobody serves it to Indian retail.**

// BUSINESS MODEL

Freemium subscriptions: **Pro ₹999/yr · Premium ₹999/mo · Ultimate ₹3,999/mo** (planned) · US at **$24–49/mo**. Later: advisor/B2B API seats.

// TRACTION

- **650 registered users** (as of Aug 19; +37% in July, 100% organic, ₹0 marketing)
- **Zerodha compliance-audited** and live
- **Anthropic Depth program:** $10K credits + architecture teardown; Boundless VC × Anthropic cohort, 50→12 companies
- **$65K non-dilutive credits** (GCP + Anthropic)
- **Clean cap table:** 100% founder-owned, no SAFEs

// THE ASK $500K pre-seed

~18 months runway.

40%	25%	20%	15%
Product & engineering: activation loop, memory layer, Strategy Builder, mobile	Growth: first GTM hire + content engine	Data licenses & compliance: NSE/BSE, SEBI advisory path, entity	Ops

What it buys: US corridor live · 100–150 paying subscribers · advisory-license application filed · W4 retention ≥25% on broker-connected users.
